

ZENITH-001 PHASE II CLINICAL TRIAL — SITE 009

SUBJECT DATA LISTING — WEEK 12 COMPILED DATASET

Data Cut: 18 November 2024 | Prepared by: Data Management Team | Version: 1.0 DRAFT

WARNING: This listing is unverified and pending QC review. Do not use for regulatory submissions.

SECTION A: VITAL SIGNS AND WEIGHT DATA — WEEK 12 VISITS

Subject ID	Visit	Visit Date	Weight (kg)	Prior Weight (kg)	Delta Weight	BP (mmHg)	HR (bpm)	Temp (C)	O2 Sat (%)
SUB-001	Wk12/C3D1	04-Nov-2024	72.4	72.1 (Wk8)	+0.3	120/78	68	36.7	98
SUB-002	Wk12/C3D1	05-Nov-2024	44.1	69.2 (Wk11)	-25.1	118/76	72	36.9	97
SUB-003	Wk12/C3D1	05-Nov-2024	88.2	87.9 (Wk8)	+0.3	300/180	145	37.1	91
SUB-004	Wk12/C3D1	06-Nov-2024	61.0	63.4 (Wk8)	-2.4	122/80	70	36.6	98
SUB-005	Wk12/C3D1	06-Nov-2024	79.3	78.8 (Wk8)	+0.5	130/84	85	36.8	96
SUB-007	Wk12/C3D1	07-Nov-2024	59.1	61.7 (Wk8)	-2.6	114/70	80	37.0	97
SUB-009	Wk12/C3D1	07-Nov-2024	60.0	61.2 (Wk8)	-1.2	142/88	91	37.3	96
SUB-011	Wk12/C3D1	08-Nov-2024	91.8	91.2 (Wk8)	+0.6	136/84	66	36.9	98
SUB-014	Wk12/C3D1	08-Nov-2024	53.2	56.8 (Wk8)	-3.6	108/68	88	37.6	95
SUB-016	Wk12/C3D1	11-Nov-2024	53.1	54.9 (Wk8)	-1.8	118/76	74	36.8	98

DATA NOTES — VITAL SIGNS SECTION:

Row SUB-002: Weight recorded as 44.1 kg at Week 12. Previous weight at Week 11 follow-up was 69.2 kg. This represents a delta of negative 25.1 kilograms in a 7-day period. Physiological weight loss of this magnitude in one week is implausible in an ambulatory outpatient population without severe acute illness or data entry error. Source document verification required. Scale calibration log for this site to be reviewed.

Row SUB-003: Blood pressure recorded as 300/180 mmHg. This value is above the physiological maximum for survivable blood pressure and almost certainly represents a transcription or data entry error. The subject was ambulatory and reportedly asymptomatic at the time of measurement. Heart rate of 145 bpm in context requires clinical and data clarification. Original source paper should be inspected immediately.

Row SUB-014: Weight loss of 3.6 kg over 12 weeks (Week 8 to Week 12) in context of ongoing diarrhoea and low-grade fever. This is below the protocol-defined threshold for weight-related dose modification (greater than 10% body weight loss from baseline) but warrants documentation.

SECTION B: ADVERSE EVENT LOG — WEEK 12 DATA

Subject	AE Term	CTCAE Grade	Onset Date	Resolution Date	Duration (days)	Causality	SAE?	SAE Report Date
SUB-002	Nausea	2	12-Oct-2024	Not resolved	ONGOING	Related	No	N/A
SUB-003	Hypertensive crisis	4	05-Nov-2024	Not resolved	ONGOING	Unrelated	Yes	MISSING

SUB-005	Fatigue	1	15-Sep-2024	Not resolved	ONGOING	Related	No	N/A
SUB-007	Anaemia	2	31-Aug-2024	22-Aug-2024	-9	Related	No	N/A
SUB-009	ALT elevation	3	07-Nov-2024	04-Nov-2024	-3	Related	No	N/A
SUB-014	Diarrhoea	2	24-Sep-2024	Not resolved	ONGOING	MISSING	No	N/A
SUB-016	PPE	1	18-Aug-2024	Not resolved	ONGOING	Possible	No	N/A

DATA NOTES — ADVERSE EVENTS SECTION:

SUB-007 Anaemia: Resolution date (22 August 2024) is recorded as 9 days BEFORE the onset date (31 August 2024). This is a temporal impossibility and represents a data entry error. Original source document verification required. Duration calculated as negative 9 days.

SUB-009 ALT Elevation: Similarly, resolution date (04 November 2024) appears 3 days before the recorded onset date (07 November 2024). Negative duration of 3 days. Source document reconciliation needed.

SUB-003 Hypertensive Crisis — Grade 4 SAE: This event meets criteria for Serious Adverse Event reporting. The SAE Report Date field is recorded as MISSING. Per ICH-E2A guidelines, SAE expedited reporting to the Sponsor must occur within 24 hours of the investigator becoming aware of the event. If onset was 05 November 2024, the reporting deadline has been exceeded and regulatory reporting may be overdue.

SUB-014 Diarrhoea: Causality assessment field is MISSING. All adverse events must have a causality assessment completed by the investigator per protocol requirements.

SUMMARY COUNT ERROR: The AE Log Summary header states 'Total Active Adverse Events: 5' but the above table contains 7 active or ongoing adverse events across 7 subjects. The summary count is inaccurate by at least 2 events.
