

ZENITH-001 ADVERSE EVENT AND LABORATORY SAFETY LOG

Integrated Safety Dataset — All Sites Combined

Data Version: 3.2 | Lock Date: 25 November 2024 | Biostatistics: DataPrecision Analytics Ltd.

DRAFT — PENDING MEDICAL REVIEW — NOT FOR REGULATORY SUBMISSION

PART I: HAEMATOLOGY LONGITUDINAL DATA — SELECTED SUBJECTS

Subject	Timepoint	Haemoglobin (g/dL)	WBC (x10 ⁹ /L)	Platelets (x10 ⁹ /L)	Neutrophils (x10 ⁹ /L)	Grade (Hgb)	Grade (Neut)
SUB-002	Baseline	13.1	6.2	241	4.1	0	0
SUB-002	Wk 4	11.8	4.4	198	2.9	1	0
SUB-002	Wk 8	10.2	3.8	176	1.8	2	1
SUB-002	Wk 12	9.4	2.9	142	0.6	2	3
SUB-002	Wk 16	9.8	3.1	155	0.9	2	2
SUB-005	Baseline	14.2	5.8	280	3.7	0	0
SUB-005	Wk 4	13.4	5.1	260	3.2	0	0
SUB-005	Wk 8	11.9	4.2	210	2.5	1	0
SUB-005	Wk 12	11.7	4.0	205	2.3	1	0
SUB-011	Baseline	15.3	7.1	310	4.8	0	0
SUB-011	Wk 4	12.1	3.2	188	1.2	2	2
SUB-011	Wk 8	14.8	6.9	295	4.4	0	0
SUB-011	Wk 12	8.2	1.4	88	0.3	3	4
SUB-011	Wk 16	14.1	6.5	280	4.0	0	0

DATA ANOMALIES — HAEMATOLOGY:

SUB-011 shows an extreme oscillation pattern: haematological values drop from normal range at Wk 4 to Grade 2 toxicity, then spontaneously recover to above-baseline values at Wk 8 (Haemoglobin 14.8, WBC 6.9, Neutrophils 4.4 — all higher than baseline), then plummet to Grade 4 neutropenia (neutrophils 0.3 x10⁹/L) and Grade 3 anaemia at Wk 12, and recover fully again at Wk 16. This extreme and rapid oscillation is physiologically implausible without an intervening clinical event (e.g. transfusion, growth factor administration, or acute illness followed by recovery). No such events are documented in the source records for this subject. The Wk 8 values exceeding baseline are particularly suspicious and may indicate blood sample mislabelling or assay error.

PART II: BIOCHEMISTRY LONGITUDINAL DATA — RENAL AND HEPATIC

Subject	Timepoint	Creatinine (mg/dL)	eGFR (mL/min)	ALT (U/L)	AST (U/L)	T.Bili (mg/dL)	ALP (U/L)
---------	-----------	--------------------	---------------	-----------	-----------	----------------	-----------

SUB-003	Baseline	0.9	91	28	22	0.6	78
SUB-003	Wk 4	0.9	90	31	25	0.7	82
SUB-003	Wk 8	1.0	88	44	38	0.8	91
SUB-003	Wk 12 (Day 1)	4.7	14	38	32	0.7	88
SUB-003	Wk 12 (Day 8)	1.1	82	35	29	0.7	85
SUB-007	Baseline	0.8	78	22	19	0.5	65
SUB-007	Wk 4	0.9	72	187	203	1.9	145
SUB-007	Wk 8	0.9	74	88	74	1.1	112
SUB-007	Wk 12	0.8	77	34	28	0.6	74
SUB-019	Baseline	1.2	63	31	27	0.8	90
SUB-019	Wk 4	1.3	61	38	32	0.8	94
SUB-019	Wk 8	1.2	62	52	44	1.0	101
SUB-019	Wk 12	1.4	58	1,204	876	5.2	412

DATA ANOMALIES — BIOCHEMISTRY:

SUB-003 Creatinine: At Wk 12 Day 1 the creatinine value is 4.7 mg/dL with a corresponding eGFR of 14 mL/min, consistent with Stage 5 CKD or acute kidney injury. However, just 7 days later (Wk 12 Day 8), the creatinine has returned to 1.1 mg/dL with eGFR 82, essentially baseline. A creatinine of 4.7 resolving to 1.1 in 7 days without dialysis or documented AKI management in the source record is biologically implausible. This likely represents either a transcription error (perhaps the decimal point was misplaced: 0.47 mg/dL is plausible), a sample labelling error, or an unreported clinical event.

SUB-019 Hepatic Enzymes at Wk 12: ALT jumps from 52 U/L at Wk 8 to 1,204 U/L at Wk 12 (a 23-fold increase, representing 30.1x ULN — Grade 4). AST similarly rises from 44 U/L to 876 U/L (21.9x ULN — Grade 4). Total bilirubin reaches 5.2 mg/dL (Grade 3). Taken together with ALP elevation to 412 U/L, these values meet criteria for Hy's Law. The clinical notes for this subject at the Wk 12 visit record: 'Patient doing well, no complaints, no adverse events to report.' This directly contradicts the laboratory values, which require immediate SAE reporting and protocol-defined dose modification actions. No SAE has been filed for this subject.

PART III: CALCULATED FIELDS AUDIT

Subject	AE	Onset	Resolution	System Duration (days)	Correct Duration (days)	Error?
SUB-002	Nausea	12-Oct-2024	28-Oct-2024	16	16	No
SUB-007	Anaemia	31-Aug-2024	22-Aug-2024	-9	N/A (impossible)	YES
SUB-009	ALT elevation	07-Nov-2024	04-Nov-2024	-3	N/A (impossible)	YES
SUB-011	Neutropenia	07-Oct-2024	02-Nov-2024	26	26	No
SUB-014	Diarrhoea	24-Sep-2024	18-Nov-2024	45	55	YES — off by 10
SUB-016	PPE	18-Aug-2024	Ongoing	NULL	Ongoing	No
SUB-019	Hepatotox.	Wk12 visit	Not filed	NULL	Not calculable	SAE NOT FILED

SUMMARY: Three calculation errors identified in the duration field. Two events (SUB-007 and SUB-009) have negative durations indicating impossible date sequences. SUB-014 duration is off by 10 days suggesting a calendar month miscalculation. SUB-019 represents an unfiled SAE that requires immediate attention and expedited reporting to the Sponsor Medical Monitor.
